

## TOTAL SOLUTIONS FROM SANYO

Sanyo Office Machines provide a complete range of computer systems and software.

Point of Sale systems range from single Cash Registers/Cash Drawer sites, up to nationwide network systems with multiple registers and cash drawers.

Sanyo Office Machines is a nationally based company with offices throughout Australia, providing advanced levels of sales and technical support to a diverse range of retailers. Staffed by professionals who are highly experienced in all facets of computer software and hardware in both wholesale and point-of-sale environments.

Systems may be stand alone Sanyo Cash Registers, Sanyo Point of Sale Terminals, Sanyo PC-based touch screen systems and Sanyo POS Magic systems, or sometimes a mixture of all three in larger retail sites. The important issue is that Sanyo provide the Total Solution - Hardware, Software, Training and Ongoing Support.

Sanyo intelligent terminals are software driven so there is no need for expensive hardware upgrades, as is the case with old fashioned and outdated systems, limited in functionality by proprietary hardware restrictions.

The heart of the Sanyo system is the software. Reliable, easy to use and accurate, it provides concise, timely information on all facets of any business, Profit, Inventory Levels, Perpetual Sales History and, most importantly, Liquidity.

Sanyo have invested over 19 years in the ongoing development of the Sanyo POS Magic System, business software package. This is now one of the most cost effective, flexible and feature packed software packages in the world.

POS Magic is true multi-user, multi-location, multi-company business software, which not only handles retail but wholesale and mixed business, including specialised software.

No matter how small or large any business, Sanyo Office Machines have a tailored solution. Another important factor is that you deal only with the principal company.

A true multi-user, multi-location, multi-company business accounting package with an extensive reporting structure, providing for exportation to packages such as Microsoft Office, Microsoft Excel, MYOB etc.

The software is in use in over 3500 sites in Australia and is now being exported to several other countries.

## Stock Control

Multiple selling prices per PLU

Up to 20 bar codes per PLU

Multi-Level recipe portion control

Automatic date based specials set up in advance

Reorder reports based on minimum and maximum stock levels

Run loyalty systems over broadband networks

Links to security camera system via [Net-Vision](#)

## Table Tracking

Multiple bills on tables

Track Table accounts from items charged at any POS Terminal in the same area

Transfer table to a new table

Combine tables together

Split payment on tables

Present fully itemised receipts on bill presentation

## POS-Vision Security

Camera Security for tracking transactions on POS Terminals

Integrated search capabilities to look at specific operators making specific transactions between selected times.

Don't spend hours reviewing security videos when you can quickly locate just the suspect transactions.

Build up complex search filters in the POS-Magic Electronic Journal to find just the transactions you need to see security videos on.

Bookmark the transactions you need with comments so that you can quickly find them again for further analysis.

Improve security where it is needed most, at the Point of Sale.
